DynamicTemplateSwitcher

Dynamic Template Switcher is a plugin/module bundle that allows either front-end users or admins to change the current template on the fly.

Users can choose a template they like as a preference. Every time the user logs in, the new template will be loaded.

Admins can choose a template to be displayed when a certain condition is met. Want a more accessible template for admin users? Want to display a minimal template for guests? Not a problem!

Dynamic Template Switcher also comes with mobile browser detection which allows admins to set up mobile templates in a single click.

Installing DynamicTemplateSwitcher

Dynamic Template Switcher (DTS) comes as a plugin and a module bundle. Please unzip the package first.

The plugin is required to allow admins to determine the custom/mobile template and for the users to determine their preferred template. **Plugin must be installed** for the functionality to properly work.

Dynamic Template Switcher module is an optional module which allows users to pick and save their own template. The module can be disabled if the option to select custom template by users is not required.

Installation of WURFL

On the first attempt to view the front end of the site, system will automatically unzip the wurfl.zip file located in /plugins/system/dynamictemplateswitcher/assets/resources/resources folder to wurfl.xml. However it is possible that if the server does not support ZipArchive class, then the extraction will fail.

If the plugin does not seem to work, please check if the file /plugins/system/dynamictemplateswitcher/assets/resources/resources/**wurfl.xml** file is available. If it is not, please unzip the wurfl.zip file in the same folder to obtain the wurfl.xml file.

Configuring DTS Plugin

Configuring the DTS plugin allows admin users to set up a switched template and conditions for the switched template.

Switched Template:

The template to switch to. This will list all the front end templates.

Preference Type:

Whether the frontend user can override the admin option.

If this is set to Frontend User, regardless of what the admin sets, the frontend user's selected template will be applied. If the frontend user has not selected a template, then even under this option, the admin option will be applied.

If this is set to Admin, then regardless of what the frontend users selects and saves, the admin option will be applied.

Switch for:

Basis of switching the template by admin users. If set to Mobile browsers, the template will automatically switch when viewed via mobile devices.

If set to Advanced rule, then the rule specified as the advanced rule will determine the criteria to apply the switched template.

Advanced Rule:

Determines the condition for switching the template if the Switch for parameter is set to Advanced rule. Advanced rule can consist of any php code allowing the admins to specify any criteria that can be thought of.

The code in the advanced rule should always return a value for the system to properly identify if the criteria is met or not. **Please refer the examples for more details.**

Configuring DTS Module

There are no specific configuration is required for the Dynamic Template Switcher module. Just install it and enable it assigning to the proper menus.

Example Advanced Rules

1. Show a different template to Guest users

Set the Switched Template to the desired template.

Enter the following code in the Advanced Rule

```
$user = JFactory::getUser();  
return $user->guest();
```

2. Show a different template to Admin users

Set the Switched Template to the desired template.

Enter the following code in the Advanced Rule

```
$user = JFactory::getUser();  
$groups = $user->getAuthorisedGroups();  
if(in_array(8,$groups)===TRUE) {  
    return true;  
}  
else{  
    return false;  
}
```

kBanners4VM

kBanners4VM is the ultimate banner management solution for Virtuemart that allows users to set up HTML and image banners for your Virtuemart e-shop.

kBanners4VM allows you to set up banner groups and assign them to Virtuemart categories allowing you to target your advertiestments to the correct audience.

Modules2Pages

Modules2Pages is the ultimate module management solution for Joomla that allows users to assign any module to any page.

Ideal for websites that use multi-page components like Virtuemart , JomSocial, Community Builder and SOBI2.

kBanners4Joomla

kBanners4Joomla is the end-all of all banner components for Joomla. Providing the same flexible interface of kBanners4VM and kBanners4SOBI, kBanners4Joomla allows users to target their banners based on conditional URL parameters.
